

Join the National EMS Quality Improvement Partnership to

Reduce Lights-and-Siren Use in EMS

Why?

- **Reduce Crashes:** Most serious ambulance crashes involve the use of lights-and-siren.
- **What Really Matters:** Lights-and-siren don't save much time and very few patients benefit from the small time savings.

What are we going to do about this?

- **The EMS Community** is coming together with a group of world class experts to safely decrease the EMS use of lights-and-siren with a national performance improvement project.
- **Our goal** is to reduce the use of lights-and-siren to less than 30% of responses and less than 5% of transports on 911 EMS calls.

Benefits of Participation include:

- **Improved safety for your patients, providers, and community**
- **Shared learning, networking, and coaching with content experts and peers**
- **Resources** for testing changes within your agency and sustaining improvements.

Join Us!

- To enroll your agency at no cost: www.surveymonkey.com/r/nemsqa participation is limited to 50 EMS agencies/systems.
- Program to start early 2022.
